

Environmental Policy

As Egis, our main objective through our Environmental Policy is to create a conscious environmental culture and integrate it into everyday life, to fulfill our responsibilities towards our employees and the environment, and to sustain our performance through continuous development and improvement by establishing reliable relationships with institutions and companies, adopting a holistic approach in all areas. In line with these objectives, our commitments are as follows:

- To minimize all environmental impacts of Egis services, including electromechanical systems, maintenance, toll collection and inspection, traffic management, and safety activities,
- To comply with legal regulations during our operations, to provide services in line with national and international standards, and to continuously improve our system according to the principle of continual enhancement,
- To ensure that all relevant parties within the defined scope and boundaries operate in accordance with our Environmental Policy, to respect and use natural resources efficiently, to minimize waste and prevent pollution at its source, to reduce the impact of hazardous waste on the environment through recovery and disposal methods, to improve energy performance, and to reduce the negative environmental impacts of our activities,
- To maintain continuous communication with customers, suppliers, and contracted service providers to improve the environmental impact of our services,
- To support appropriate design and procurement of materials, products, and services that improve environmental performance, and to maintain ongoing communication with stakeholders,
- To raise, develop, and sustain employees' environmental awareness by organizing training and awareness activities,
- To identify and take preventive measures against environmental risks that may affect service delivery and compliance, thereby increasing and maintaining customer satisfaction,
- To monitor our environmental performance and efficiency, set measurable objectives, continuously improve, and consider environmental impacts by using appropriate teams, equipment, and technologies,
- To be a pioneer in tunnel operations by promoting renewable energy applications, energy efficiency, climate change mitigation, prevention of environmental pollution, and the enhancement and dissemination of environmental awareness.
